

Incidents

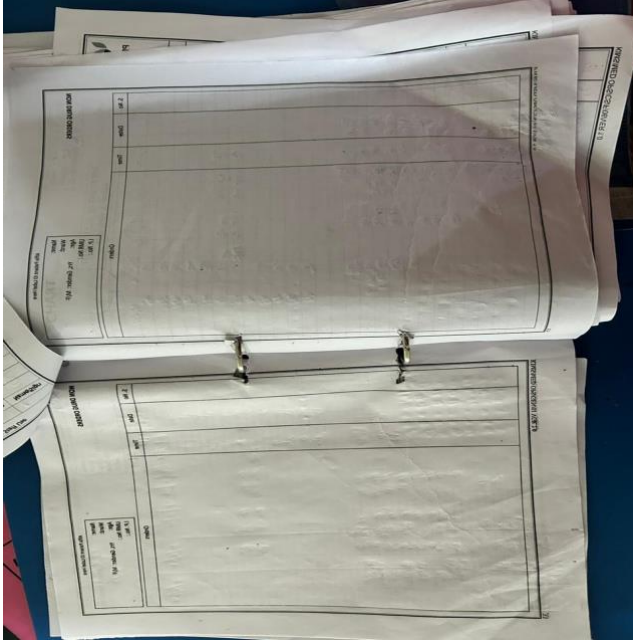

1. Post Natal ward nurses' progress notes lack proper details of patients, resulting in incomplete and insufficiently documented patient information.

2. No clear monitoring of vital signs is documented, leading to vital signs not being consistently tracked or recorded.

3. Non-drug orders are left empty and incomplete, with required orders for patient care missing or not filled out

4. Cut strips of medications are found in the pharmacy, indicating that medication packaging is improperly handled and stored.
